EDUCATION

Techno India University

B.Tech in Computer Science & Engineering

Kolkata, India

2023 – Present

EXPERIENCE

Moual (Stealth Startup)

2026 – Present

Founder & Lead Engineer

- Architecting India's first AI-powered cloud ERP platform tailored for the modern jewelry retail industry.
- Engineering a high-performance, multi-tenant system to handle complex inventory workflows, automated billing, and multi-branch synchronization.
- Designing and prototyping an IoT-enabled RFID tracking system module to automate physical stock audits.
- Developing the scalable backend architecture using Node.js and PostgreSQL to ensure data integrity across parallel transactions.

Neurathon 2026

Feb 2026

Frontend and Integration Developer (Finalist)

- Built and deployed a working MVP of 'Event-Swarm', a multi-agent AI orchestration platform, during a 48-hour continuous hackathon.
- Designed a platform bridging the gap between simple chatbot interfaces and complex enterprise automation.

PROJECTS

Civic Fix (Smart India Hackathon Project) | *React Native, Node.js, MongoDB, AI Orchestration*

- Developed an MVP for the Smart India Hackathon (SIH), securing a spot as a campus finalist for solving real-world municipal challenges.
- Built a location-aware mobile app featuring Role-Based Access Control (RBAC) with unique dashboards for Citizens, Workers, and Municipal Heads.
- Implemented dynamic geo-fencing that auto-updates local civic issues in real-time when a user changes their city location.
- Engineered an AI dispatch engine that parses complaint details to automatically route tasks to available field workers and track resource usage.

3D-Portfolio | *Three.js, React Three Fiber, Blender, Framer Motion*

- Built an immersive, gamified "One Piece" 3D world using React Three Fiber and Three.js.
- Modeled custom low-poly assets in Blender with baked textures, utilizing GLTF compression for optimal web performance.
- Implemented complex scroll animations, raycast interactions, and physics via Framer Motion.

Hire Junc (Smart India Hackathon Project) | *Node.js, Express, React, PostgreSQL*

- Built a freelance application supporting a real-time escrow system to ensure secure transactions.
- Integrated an algorithm-based work-suggestion engine to assist new freelancers in finding relevant opportunities.

Eco-Home (UN SDG 7 Alignment Project) | *Python, React, MongoDB, AI Integration*

- Developed an AI-based energy-saving system for homes and apartments.
- Created features to track electricity bills and appliances, actively recommending opportunities to reduce carbon footprints and save money.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, HTML/CSS

Frontend: React, Next.js, Redux, Tailwind CSS, Three.js, Vite.js, Framer Motion

Backend & Databases: Node.js, Express, PostgreSQL, MongoDB, GraphQL, Redis

DevOps & Cloud: Docker, Kubernetes, AWS, Jenkins, Git, NGINX

Design & 3D: Figma, Blender, Prototyping, Wireframing
